TAFT.

BY THE SAME AUTHOR.

Taft's Operative Dentistry.

Fourth Revised and Enlarged Edition. 136 Illustrations.

Price, handsomely bound in Cloth, \$4.25; Leather, \$5.00.

The rapid sale of the previous editions of this work is sufficient proof that the author did not over-estimate the wants of the profession for a book containing the principles of the science of Operative Dentistry, properly digested, methodized, and illustrated in such a manner as to be readily available to both practitioner and student. Great changes and improvements having been made in every department of Dental practice since the publication of the previous edition, it has been found necessary to reconstruct this to a considerable extent, and to make many additions. New instruments and appliances have also been introduced, which have proven to be of great value to the profession.

"Professor Taft has done good service in thus embodying, in a separate volume, a comprehensive view of operative dentistry. This gentleman's position as a teacher has rendered him familiar with the most recent views entertained in America on this matter, while his extensive experience and well-earned reputation in practice have made him a competent judge of their merits. We commend Professor Taft's able and useful work to the profession."—*London Dental Review*

"We have not time or space to notice this work in detail. All the important operations in all their modifications are clearly discussed by the author; and the work is highly practical throughout."—*Dental Register*.

"This work is already too well known in the profession to need any extended review at our hands. In all the literature of Dentistry there is nothing which has met with greater favor, or been more extensively adopted as a text-book. * * * The best work upon operative dentistry extant."—*Independent Practitioner*.

"We gladly welcome another edition of this standard work."—*American Journal of Dental Science*.

"That a fourth edition of this work is demanded, is evidence that teachers in dental colleges deem it better for the use of students than any work yet published."—*N. E. Journal of Dentistry*.

. Can be ordered through any bookseller or Dental Depot, or upon receipt of the price the publishers will send it, postpaid, to any address. Catalogues of Dental Books free.

PREFACE.

This work, while making no pretensions to perfection, presents to the student and practitioner a reference to the principal papers which have appeared in dental periodical literature in the English language, on every subject interesting to the profession. It has not been the intention to catalogue every paper, but it is believed that few, if any, really valuable ones have been omitted.

The compiler had collected much of this matter in an *Index Rerum*, which, during his life as student, practitioner, teacher and editor, he has found to be very useful.

He has now embraced the opportunity to render practically complete and available the work which has been so serviceable in its miniature form.

Much valuable matter has appeared in the German and French Journals, only a part of which has been translated and finds a place in this work ; of the remainder it is hoped a full list will appear in another edition.

The Index of authors is not intended to be a complete list of the contributions of the various writers to the periodicals of the profession, but rather an indication of the subjects upon which papers by them may be found, and of the more important efforts.

One valuable and numerous class of contributors would seem, by this classification, to suffer injustice, or at least to be overlooked, viz.: those who merely describe cases. On examination, it was found necessary, in the interests of economy of space, to leave these uncatalogued at present. We hope, however, at some future time to add a profitable list of reported cases.

The author's desire and hope is that this work may aid the students and readers of our profession in the examination of that which has been made matter of record, enabling them, with more readiness than before, to ascertain where and by whom any given subject has been considered.

The Index is brought to January 1st, 1886.

PERIODICAL LITERATURE OF DENTISTRY.

BIBLIOGRAPHY.

- *1839-. The American Journal of Dental Science.
Monthly. v. 1-10. June, 1839, to July, 1850.
8vo. New York. Vol. 5 was published in
Baltimore.
— The same, Second Series. Quarterly. v. 1-10.
1850-60. 8vo. Baltimore.
— The same, Third Series. 1867-. Monthly. 8vo.
Baltimore.

Of this, the first of the long line of journals devoted to dental subjects, the following account may be interesting:—

A specimen number was issued on the 1st of June, 1839, under the direction of a publishing committee, consisting of E. Parmly, E. Baker and Solyman Brown. It was to consist of forty-eight pages, twenty-four of which were to be devoted to the republication of standard works on dental theory and practice. It was to be issued monthly. By the fourth number, the circulation reached was 511, to 174 subscribers.

During the first year the journal was conducted by E. Parmly, of New York, and C. A. Harris, of Baltimore, where it was printed. At the close of the year it came into possession of the American Society of Dental Surgeons, by whom it was issued quarterly instead of monthly, and the subscription price was increased from \$3.00 to \$5.00. From that period to August, 1850, the journal continued to be issued under the charge of several editors. It was then transferred, as a private enterprise, to Dr. C. A. Harris, of Baltimore, who published the new series, in which, after the publication of Dr. Bond's treatise, in 1851, the republication of complete works ceased.

With the death of C. A. Harris, in 1860, terminated the new series, and it was not until 1867 that the third series appeared, under the editorship of A. S. Piggott and F. J. S. Gorgas.

We append a list of the republished works, showing the volumes of the journal in which they appeared.
